

### Abstract

Hybrid laser modes are locally polarized. The polarization view is used to investigate this and can show radial and azimuthal polarization especially.

**Author:** Michael Kuhn, LightTrans GmbH  
**Keywords:** Polarization, Hybrid Laser Modes, Propagation  
**Requirements:** VirtualLab version 4.2.1 or higher – **Starter Toolbox**  
**Scenario Version:** 1.1

Corresponding files can be found [here](#).

The sample light path diagrams will create radial and azimuthal polarized fields respectively. If the data view is active, pushing the toolbar button  will make the polarization ellipses visible.

### Technical Support

If you have any questions, remarks or problems concerning this application scenario, or in using VirtualLab in general, please do not hesitate to contact us by E-Mail [support@lighttrans.com](mailto:support@lighttrans.com).

Please use the update service to install the current version of VirtualLab. Alternatively you can use the latest **Trial Version** of VirtualLab which is available at our [download site](#). If you have been registered already for an older trial version, just contact us by [E-Mail](#).

To ensure that this application scenario gives the same results as described, set the global settings to the default values. In VirtualLab this can be done in the **Extras > Global Options** dialog with the **Reset All** button.
